Arthropod Pests of Horticultural Crops in Tropical Asia

The black vine weevil is a world-wide pest of nursery, small fruits and garden crops, and information on the biology of the insect is needed to devise innovative new strategies for management of this important pest. Scientists at the Horticultural Crops Research Unit in Corvallis, Oregon conducted a study evaluating the longevity and reproduction of black vine weevil on different plants; adult weevils were fed leaves of a single plant species for 300 days, or leaves of one plant species for ...

AGLL 2701 | Horticultural Entomology Introduction - CSU Online

Agricultural and horticultural crops are attacked by a wide variety of pests, the most important being insects, mites, nematodes and gastropod molluscs. The damage they do results both from the direct injury they cause to the plants, and from the indirect consequences of the fungal, bacterial or viral infections they transmit.
