Building Web Services With Java

Java API for XML Web Services (JAX-WS) is a technology for building web services and clients that communicate using XML. JAX-WS allows developers to write message-oriented as well as Remote Procedure Call-oriented (RPC-oriented) web services. In JAX-WS, a web service operation invocation is represented by an XML-based protocol, such as SOAP.

Building Web Services with JAX-WS - The Java EE 6 Tutorial

Building RESTful Web Services with JAX-RS This chapter describes the REST architecture, RESTful web services, and the Java API for RESTful Web Services (JAX-RS, defined in JSR 311). Java RESTful Web Services With JSON and Jersey - Javapapers

Gradle's Java support was the first to introduce a new concept for building source-based projects: source sets.The main idea is that source files and resources are often logically grouped by type, such as application code, unit tests and integration tests.

Building Java & JVM projects - Gradle

Web services, in one form or another, have been around for more than two decades. For example, XML-RPC services appeared in the late 1990s, followed shortly by ones written in the SOAP offshoot. Services in the REST architectural style also made the scene about two decades ago, soon after the XML-RPC and SOAP trailblazers. REST-style (hereafter, Restful) services now dominate in popular sites ...
