Nursing research is held to the same ethical standards as all other research involving human participants. Nurses need to understand and apply ethical principles to their own research, as well as to the reading and review of research. The Declaration of Helsinki in 1964 is a statement about ethical principles, initially applied to medical research, but which now guides all types of research.

Ethical context of nursing research | Evidence-Based Nursing

Evidence-Based Medicine: An Oral History is available free for all to see and learn about the origins of evidence-based medicine (EBM). A video features EBM leaders' perspectives on the past, present, and future of EBM, along with personal reflections of clinical and patient encounters and shared decision making in the context of EBM.

JAMAevidence

The practice of EBM means integrating individual clinical expertise with the best available external clinical evidence from systematic research." p. 71. In the context of evidence-based ethics it is not the specification of EB for medicine that interests us so much but the characterization of what evidence or EB means in general.
