GameMaker: Studio has its own proprietary programming language called the GameMaker Language (abbreviated to GML). The GameMaker: Studio programming language, GML, gives you much more flexibility and control than the standard actions that are available through the Drag'n'Drop interface. There are a number of different places where you can use this language to create and control your game:

GameMaker Language is GameMaker's scripting language. It is an imperative, dynamically typed language commonly likened to JavaScript and C-like languages. The language's default mode of operation on native platforms is via a stack machine; it can also be source-to-source compiled to C++ via LLVM for higher performance.

**GameMaker - Wikipedia**  
This section contains all the information on the Game Maker Language. GameMaker: Studio contains a built-in programming language, commonly called GML, which gives you much more flexibility and control over your games than the standard Drag and Drop actions do. In this section we describe the language GML and we give an overview of all the functions and variables available to control all aspects of your game.
