Linear Programming (Graphical Method)

Graphical Method of Solving Linear Programming Problems We already know how to plot the graph of any linear equation in two variables. The process involves plotting the points that satisfy the equation on the coordinate axis and joining them.

Graphical Method of Solving Linear Programming Problems

To find the graphical solution of linear programming problems, we have to follow a few steps. Step 1) Formulate the problem using the objective and the constraints. Step 2) Frame the graph by plotting the constraints lines. Step 3) In this step, determine the valid side of each constraint line.

This method is used to solve a two-variable linear program. If you have only two decision variables, you should use the graphical method to find the optimal solution. A graphical method involves formulating a set of linear inequalities subject to the constraints. Then the inequalities are plotted on an X-Y plane.
