natural sciences (like biology, geology etc.) deal with systems that seem to obey the laws of physics. According to physics, the physical laws of matter, energy and the fundamental forces of nature govern the interactions between particles and physical entities (such as planets, molecules, atoms or the subatomic particles).

science - Wikipedia

The physical sciences are generally composed of four distinct areas namely the earth sciences, astronomy, chemistry, and physics. Each of them is further subdivided into the smaller field. In this article we will try to unravel a few mysteries, chief among which is the question; is physical science the same as physics.
