Humans use different domain languages to represent, explore, and communicate scientific concepts. During the last few hundred years, chemists compiled the language of chemical synthesis inferring a series of “reaction rules” from knowing how atoms rearrange during a chemical transformation, a process called atom-mapping. Atom-mapping is a laborious experimental task and, when tackled with ...

Eukaryotic transcription initiation by RNA polymerase II (Pol II) requires the assembly of a preinitiation complex (PIC) on core promoters. The binding of TATA box-binding protein (TBP) to the TATA box promoter has been thought to be a general rule in PIC assembly and transcription initiation. However, most coding genes lack a TATA box, and nearly all Pol II-mediated gene transcription ...
